3. Technical Root Cause & System Fix Applied

Root Cause: When users paid via bank transfer/OPay, the 30-minute expiry timer prematurely flagged transactions as FAILED. Upon returning to CirclePass, PaymentVerifyView encountered the FAILED flag and immediately exited without re-verifying with Paystack.

Resolution: The verification logic was updated to actively query Paystack for any FAILED or PENDING record upon inspection. The reconciliation job was scheduled to execute across all past 7-day transactions directly inside the backend Docker container on EC2.
